your business.**

The Pro Spangle Difference Spangles Versus Sequins And Rhinestones

No HOLES! The first thing you'll notice about **ProSpangle** is the beautiful, consistent output from its Hotfix spangle process. Sequins have a hole in the center that is either held on with thread, or shows the color of the shirt through the design – don't settle for sequins, reach for spangle transfers!

The Hotfix spangle transfers produced with **ProSpangle** won't suffer from thread breaks, like traditional embroidered sequins and allow you to wholesale the transfers themselves rather than a completed end product – it's up to you.

Being able to produce a design without the holes makes the design look more like rhinestones, with their higher end and more current appeal. It will also get you a higher price point at SIGNIFICANTLY less cost than a comparable rhinestone transfer.

Better yet, the incredibly soft feel of spangles and its ZERO lead content make it ideal for children's wear and its light weight makes it appropriate for the finest in women's fashions.

For those looking for FAST, PROFITABLE and BEAUTIFUL bling for their apparel business, **ProSpangle** is the answer.

Sierra HotFix Era Design Software

Includes HotFix for Sequins design software from Sierra, part of the Design Era Suite. Design Era can also be upgraded to output to Automatic Rhinestone Transfer Systems, Plotter/Cutters, Printers and a complete Embroidery Design software.

Create mixed media designs with ProSpangle and HotFix Era!
